POST OFFICE BOX 314
VALLEY CENTER, CALIFORNIA

GREETINGS FOR 1958

We take great pleasure in presenting this list of for your approval. You will find many new varieties added. Also, after many years of hybridizing and selecting of the best seedlings, we have decided to introduce four of our own new creations. We hope you will like them too.

Our winters are cold enough to assure hardy rhizomes and the warm dry summers harden them for shipping and transplanting. Many have written how pleased they were with the results of the plants they received from us.

May we take this opportunity to thank our many customers for their splendid orders, and those who have written to us expressing their satisfaction and thanks for the extras. I wish we could answer all of you personally. If you have not already done so, won't you send us a trial order and then join our list of satisfied customers? We are growing each year and it is you, our customers, who have made it possible. We are still small enough though that each order receives my personal inspection.

Visitors are always welcome, but a special invitation to you at IRIS BLOOMING TIME, April and May, with our peak bloom about May 1st.

Valley Center is 9 miles N.E. of Escondido, on the road to Mt. Palomar, where the famous observatory is located. We are on the main road . . . just look for our sign.

Sincerely,

MRS. FRANCES J. LAWSON.

1958 INTRODUCTIONS

BROOKS (Lawson) M. 36" No. 54-27
(Great Lakes X Katherine Fay) A lovely
cornflower blue with a pale blue beard.
It is very ruffled and of heavy sub-
stance, making a long lasting flower.
It is fertile both ways and from its
parentage should produce some interest-
ing seedlings \$20.00

BOLD BLUE (Lawson) M. 36" No. 54-28
(Great Lakes X Katherine Fay) This is a
large, round, bold flower in marine
blue. The falls are slightly darker and
quite ruffled. There is a bright orange
beard for contrast and pollen for the
hybridizers \$10.00

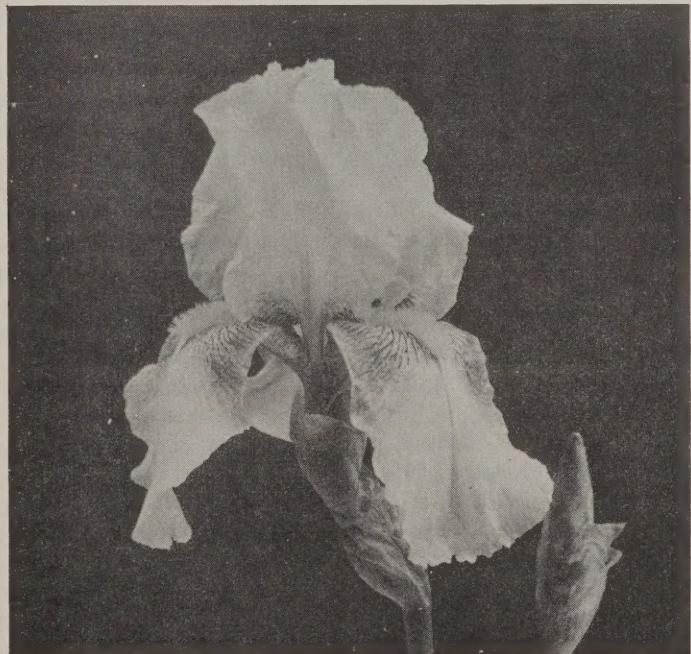

MARQUISE LA GRECA (C. G. White) M.
30" (parentage unknown) One of the
few oncobreds that has a really onco-
type blossom on a well-branched stalk.
It is a buffy olive with the falls closely
lined with Burnt Umber and narrowly
edged with Honey Yellow. It has a
signal patch of Anthracene Violet. It is
fertile both ways and is producing some
interesting seedlings in various greenish
shades. For the hybridizer \$15.00

1958 INTRODUCTIONS

NO-TOP (Lawson) M. 36" No. 53-7 (Purissima X Spindrift). This is one of the iris that received so much attention at the A.I.S. Convention in Memphis last year. It was a guest in Mrs. Elby Martin's garden and she wrote that it caused more comment than any other iris. Several thought it was the greenest iris seen. However, in our garden it seems a cool white with greenish buds. The name describes it as it has no standards but has six bearded falls that open out flat like a Japanese. It is a large flower, 6 to 7 inches across. There are usually 6, sometimes 8, styles in the center. It has no pollen but will set seed. A novelty iris that also offers breeding possibilities. Co-introduced by the Rainbow Hybridizing Gardens \$15.00

PAUMA (Lawson) M. 36" No. 56-18
(parentage—two plicata seedlings) This lovely plicata has Empire Yellow standards. The falls are cream with Burnt Sienna lines and dots at the haft, shading down to green and brown dots at the lower edge. The buds are quite green. Has pollen \$10.00

IRIS CULTURE

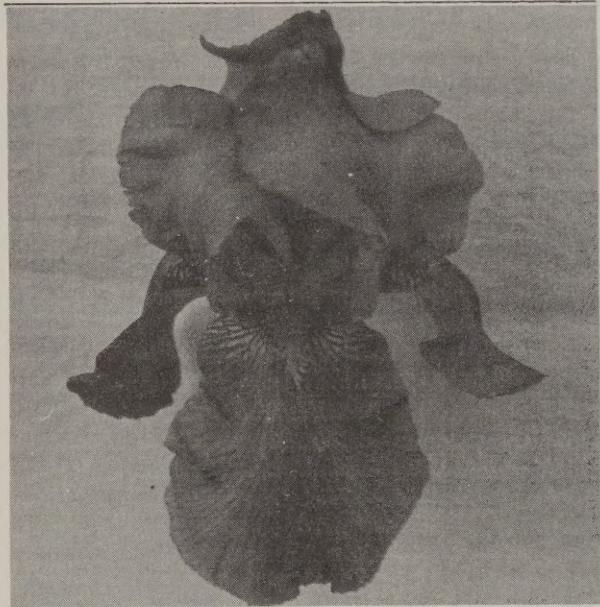

Iris are easy to plant and require a minimum of care. They will do well in almost any sunny, well drained spot. Spread the roots and plant so the rhizome is just barely covered with soil. The soil should be kept moist until the plant is well established, then will withstand drought and neglect, but respond bountifully to proper care and culture. Bone meal may be worked into the soil before planting, a small handful to each plant, or used as a side dressing once a year. Be careful if you use fertilizers, not to let it come in contact with the rhizome, as it may cause rot. Since iris multiply rapidly, planting should be spaced from 12 to 18 inches apart to allow for proper ventilation. Divide them about every three years for best results.
